## New type of Lift gate

By Michael Harper

### ***This article is basically to understand the difference between Ezy Lift & conventional Lift gates.***

This article is basically to understand the difference between Ezy Lift, Lift gates and conventional lift gates. Ezy Lift is “Revolutionarily” different, so different it’s patented around the world. Ezy-Lifts are currently used by hundreds of users in the areas of construction, automobile parts, machine shops, delivery services, moving, special lifting and so much more. There are two Ezy-Lift models to choose from, our 1000lbs Model 12 or the model 20 capable of lifting a whopping 2000lbs.

The Ezy Lift is basically a lift that is installed inside the pickup truck bed; it is hidden away leaving no eye sores on the back of the truck. Fact is there are many different Lift gate manufacturers - Maxon, Leyman, tommy gate and many more. Ezy lift is in a whole different class, a class in its self because no other lift can do what an Ezy-Lift can do. The creator of the Ezy-Lift held to the main objective to overcome the things a regular Lift gate is not capable of doing. To use a lift gate you must be able to roll the object onto the gate.

With Ezy lift no wheels of any type are needed to move or place the load. This really makes lifting dead weight possible, even on an un-even surface, when using an older style lift gate this is difficult at best or even impossible, more than likely it is also hazardous. With Ezy Lift no matter the terrain, you can get your load safely placed, not only protecting load, but your employees as well. You can also leverage the load anywhere you like.

Because of our patented design you can place your load anywhere in the bed of the truck. This means no sliding or pushing your load. For example: on one of your jobs, a worker that needs to move a 400lb valve, to the other side of the job, how does that normally get done and how long would he have to wait for until the equipment arrives? With an Ezy-Lift equipped truck there is no need for a flat bed trailer and a cherry picker, or even a back ho. Simply get the closest truck with an Ezy lift and in minutes the valve is where it needs to be, all with one person, and without any disruption or un-necessary delays.

Experiencing this one time is all you’ll need to be convinced that not only does the Ezy-Lift do the job, but you’ll need more than one, because it is just so versatile, quick and easy.

Safety is always a major issue with Lift Gates. Ask your insurance company if you could qualify for a discount when using your standard old fashioned lift gate? You’ll be lucky if your rate remains the same. Show your insurance agent an Ezy-Lift and she/he will see the “safety factor” immediately and once they are on board anything is possible, imagine you might even get a better worker compensation rating. You can operate an Ezy Lift from a safe distance, away from harm’s way, in fact as far away as 20ft. This means no chance of a load falling on you or anyone else. Lifting heavy loads and actually placing them in the truck becomes an easy one handed operation, one that’s far safer and quicker and best of all with just one person.

Ezy lift just makes sense all the way around. You can also use Ezy lift to lower tools down in man holes. Why not use it to pull a stump from the ground? Pull a car from the mud? It is a hydraulic lift gate with a 2 ton winch. Just imagine what an Ezy-Lift can do for you!
