

Reduce the risk of injury associated with lifting heavy cargo

There are approximately **700,000 back-related** injuries in the United States each year. **Eighty percent** of these injuries occur to the lower back and are associated with manual materials handling tasks.

According to the U.S. Bureau of Labor Statistics, back injuries account for **one of every five** injuries and illnesses in the workplace but consume more than **40% of all workers' compensation dollars**.

The major causes of back injuries are improper lifting techniques, improperly stacked supplies, lack of safety procedures and training, short cuts, failure to maintain equipment and inattention. Definite steps can be taken to help curb the incidence of back injuries.

Improve Safety with the Ezy-Load Lifting System

- Eliminate back and hand injuries caused by lifting and sliding heavy items manually
- No lifting, pulling, or pushing cargo onto ramps, platforms, or tailgates
- Distributes the load on all four corners of your pickup's bed – unlike corner mounted cranes or lift gates
- A four button hand-held control allows the user to lift, position, load, and unload heavy or bulky cargo while standing clear of the load
- Handle up to 1000 lbs. with complete control
- The Ezy-Lift Lifting System provides a safer work environment to help reduce injuries

Ezy-Lift is the new innovation that allows you to **lift, load, and go** independently and it looks great in your pickup too. Pickup trucks are made for hauling heavy stuff from place to place. Old methods for loading and unloading can take lots of time and effort – lifting, tugging, pulling, and straining to get cargo onto the tailgate and then pushing it into the bed often takes more than one person. Forklifts or cranes aren't always available costing you delays, time, and money.

Bumper-mounted lift gates and cranes that stick up from the corner of your truck's bed are just too heavy and detract from your pickup truck's appearance.

Ezy-Lift is the solution – it lifts and positions cargo for you easily, whenever and wherever you want.

*Quicker
turnaround - faster
loading and
unloading*

Increase Productivity

- Single person operation
- Fast action loads or unloads cargo in about 45 seconds
- Deliver to remote locations – no need for a forklift or crane at the delivery site
- Faster loading and unloading
- Quicker turnaround on deliveries – more loads delivered in a day
- Position cargo in the pickup bed or on the ground or dock – anywhere you want it
- Minimize damage to cargo – sets cargo down softly, on the ground, or in the truck bed

The easy to use four button hand-held controller allows the operator of the Ezy-Lift to precisely position the cargo in the truck, or on the ground.
